Get superior weed control plus unrivalled harvest flexibility

With improved weed control using TruFlex[®] Roundup Ready[®] technology and our very own PodGuard[®] trait, InVigor[®] R 4022P is the first and only variety to build yield potential from sowing to harvest.

TruFlex[®] canola with Roundup Ready[®] technology offers greater flexibility in spray rates and timings, extending the window of application beyond the six-leaf stage.

The yield-boosting PodGuard[®] trait can help avoid losses through mechanical shattering during harvesting or shattering during tough weather conditions at harvest, meaning crops have a much better chance of reaching their full potential.

PodGuard[®] provides the flexibility to either windrow later or direct head with less risk of yield loss through pod shatter. You can delay windrowing from 60% to 90% seed colour change or direct head (even bigger crops) with less risk of loss. Canola crops containing the PodGuard[®] trait have produced up to 13%* extra yield gain through more pod fill and less shattering during the harvest process.

To find out more, download the InVigor R 4022P technote and reserve your supply today as seed supplies are limited and will sell quickly.

*Data compiled from 26 paddock demonstration trials in 2015 (with IH51RR) and 19 trials with IH51RR and InVigor R 5520P in 2016.
